Corrective Action and Preventative Action Effectiveness

Beverlyn Tucker
Dr. Gregory Block

Federal Aviation Administration is a concern on CAPA process effectiveness. Last year during their audit in the factory failure on verification has increased significantly. Top management is asking data on how well we are doing on our CAPA process. Opportunities come in different ways.

The content of this project is hypothetical for class project purposes only.

INTRODUCTION

Corrective Action Preventative Action (CAPA) Effectiveness is one of many tools used by many industries to minimize risk and potential reoccurrence cause. The key to effective corrective action is to have verifiable objective evidence in the Corrective Action Plan (CAP) and a robust plan. All verification must involve Measurement of Effectiveness (MoE). MoE is to weigh the proof of the root cause of the problem was removed or mitigated. The Tucker Company use CAPA to monitor compliance, to help ensure the program conform to the process requirements and Business Process Instructions. Also creating an environment strive steadily improving quality that benefits you, myself and all surround us.

This is intended to be used by the Regulatory Quality Oversight System (RQSO) and management who have received a notification from the Federal Aviation Administration (FAA) about the CAPA process.

A CAPA generates a Corrective Action Report (CAR) and gets visibility to the top management. During the verification process; when the process is compliant with the requirement, then quality assurance status the Corrective Action (CA) as PASS signed off the work plan. And when the process not met or deficient to the requirements, quality assurance status it to FAIL then signed off the plan. If CA fails this will be going back to the first cycle. Initiate a new Corrective Action Plan Action.

GUIDE TO CAPA EFFECTIVENESS

Audits - Is a method for verification, witnessing, desktop review and asking questions to the process performers to ensure an employee performing accordingly and match with Business Procedure Instruction (BPI) to the requirements.

Random Sampling - Is a procedure for sampling of a population in which taking a sample selection out of batch to eliminate biases.

Trend Analysis - Is a tool can be used to determine if the problem persists, how frequent or the fix was successful.

Monitoring -The real time observation to ensure performers are working to the process and if there is new process change are working to the latest revision.

Measurement of Effectiveness (MoE) - Is a threshold that will indicate the possible cause is eliminated or mitigated to Acceptable level.

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

BUSINESS CASE

During the Federal Aviation Audits number of findings has been significantly increased and during their follow-up, the significant amount of corrective action fails. FAA has a collaboration with Regulatory Quality System Oversight (RQSO) management. Federal Aviation Administration wants The Tucker Company to be transparent with them. The result of the meeting is the "PARTNERSHIP." During the collaboration, they agreed to share the CAPA effectiveness result for a year. The first step is to share the data from the previous year.

STAKEHOLDER

There are various staff resources and stakeholders that are involved. This case the External stakeholder is the Federal Aviation Administration (FAA). An internal stakeholder is the Regulatory Quality System Oversight (RQSO), Deputy Quality Manager (DQMR) a program quality who monitor the program compliance, Quality Managers and Employee.

STAKEHOLDER DESCRIPTION

| Role | Responsibility |
|--|--|
| Federal Aviation Administration (FAA) | Government agencies who oversee the roles and regulations that can affect the public. The voice, eyes and the ears of the public. |
| Regulatory Quality System Oversight (RQSO) | Internal quality management who oversee the overall compliance performance of the company and oversee the regulatory requirements. |
| Deputy Quality Manager (DQMR) | Internal management group who monitor the program level, to ensure conformity to the requirements in the program level. |
| Quality Manager | Manager who manage the operation in respective work center or area |
| Quality Assurance | A quality personnel who stamp or sign off work instruction order/CA |

GLOSAARY Refer to Appendix A

DATA QUESTIONS

1. What are the top 5 processes in terms of effectiveness?
2. Is CAPA have been adequately shared and included in management review?
3. Are there any tools used to track the favorable and unfavorable trend?

4. What is the employee turnover rate in manufacturing?
5. What is the confidence level of CAPA Effectiveness?

MODELS

Entities

The Tucker Company is relational data. Each entity ensures that the key in a table is unique and entity type corresponds to one or more tables.

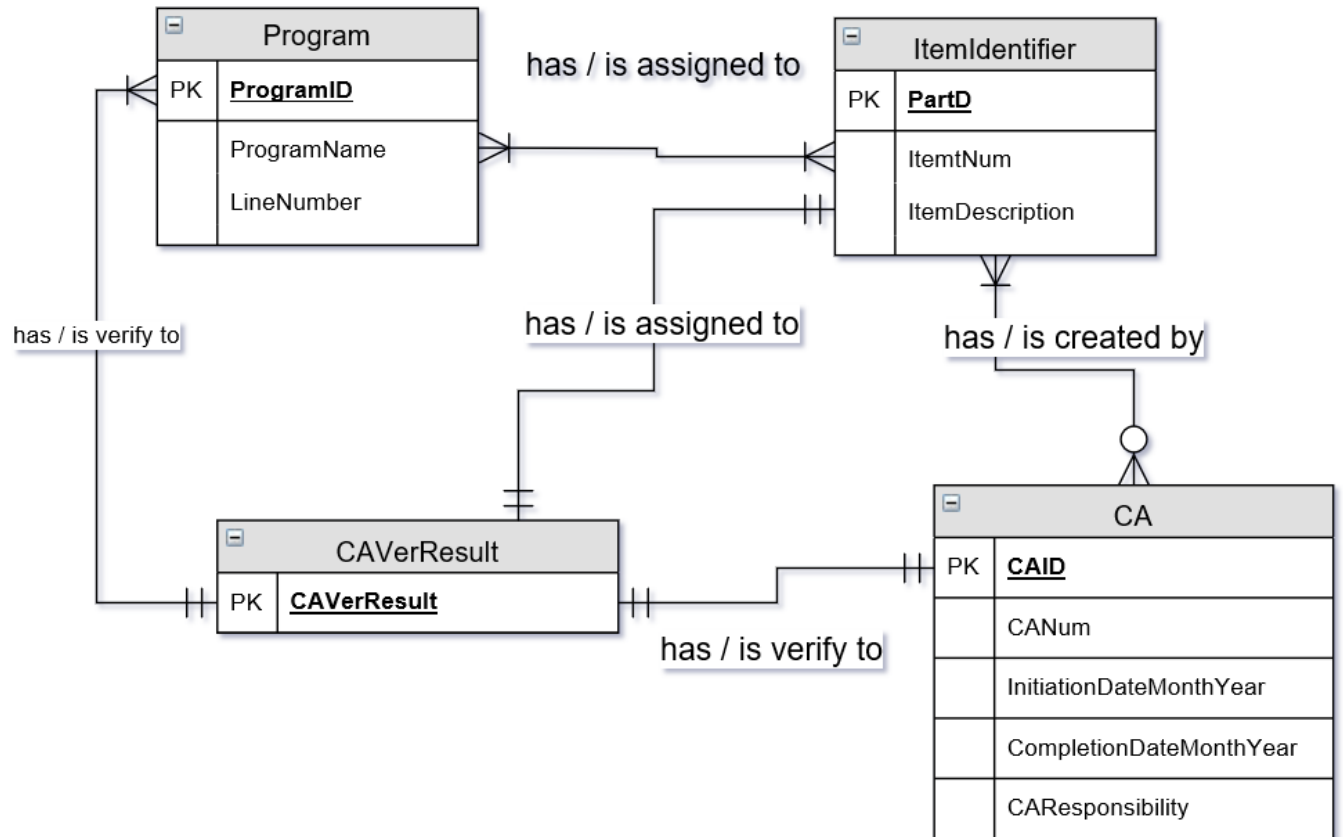

Relations

The Tucker Company own airplane manufacturing. All data are relational data. Attribute contains unique and points to another attribute it contains a unique instance of a data or key. Each table has a unique primary key which identifies the information in each table. Data have many to many relationships and use a bridge table to solve many to many relationships.

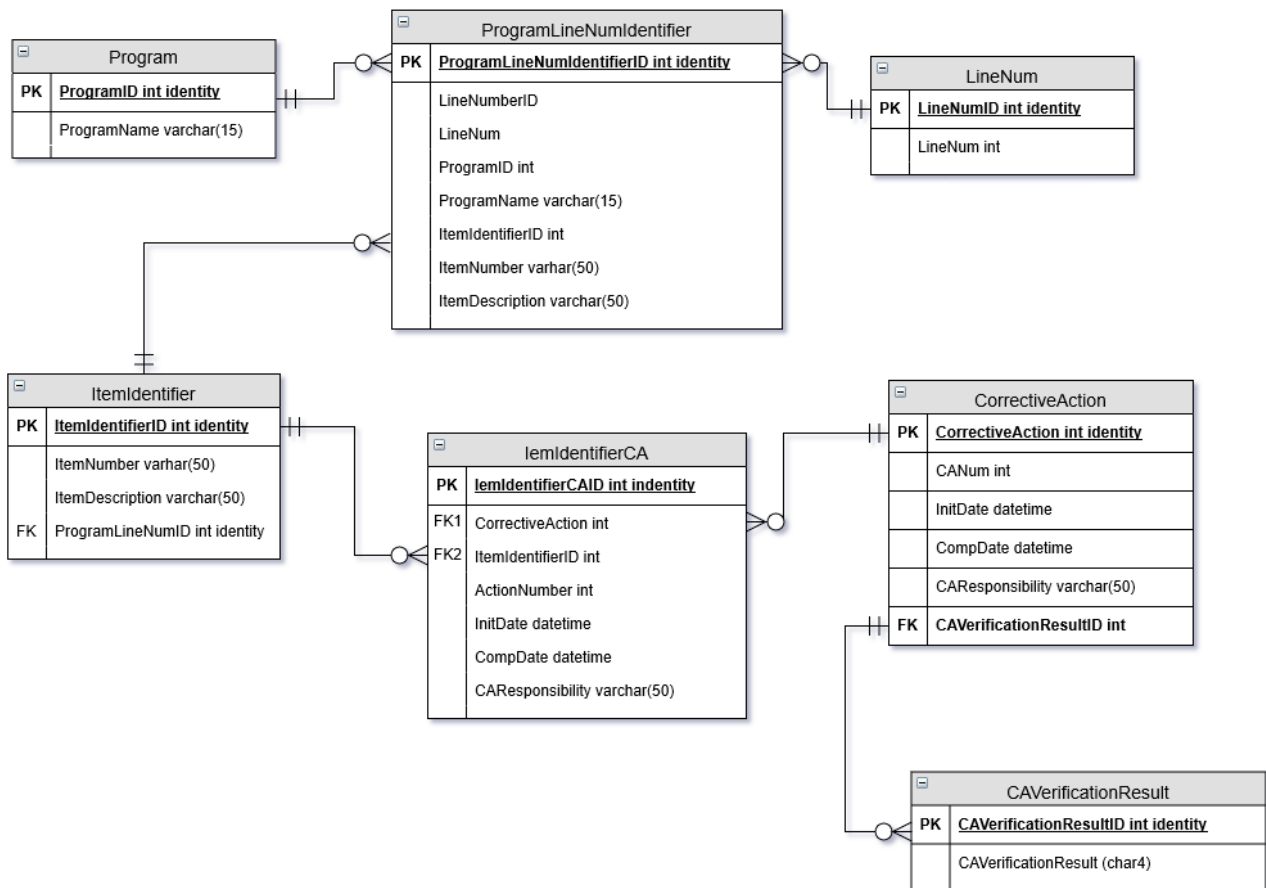

The company has three airplane programs Star Line, Gold line and silver line. Both three programs are producing a significant amount of aircraft a year. To build an airplane it requires thousands and thousands of parts to make one. Various parts use in other line and airplane programs. It is essential to trace what line number and what program consumed the parts if an opportunity will present later, we will be able to trace it back and we will be able to identify the perspective part number, program and line number tie into corrective action.

Corrective Action is required to have a unique ID. This way will create a unique corrective action number in every time the problem occurs. During the verification process, we will be able to verify the CAPA in place remove the cause or pass and fail. It is imperative when writing corrective action one-part number or a process in each CA to provides excellent visibility during the verification process. It creates an accurate trend analysis.

APPENDIX A GLOSARRY

ACRONYMS

| | |
|---------------|---|
| CAP | Corrective Action Plan |
| CAPA | Corrective Action Preventative Action |
| CAR | Corrective Action Report |
| Deficiency | Emergent not fulfilling the requirements |
| DQMR | Deputy Quality Manager |
| Effectiveness | Effectiveness is the capability of producing the desired result was achieved, |

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

| | |
|------|---|
| | and or, are expected to be delivered, taking into account their relative efficiency |
| FAA | Federal Aviation Administration |
| MoE | Measurement of Effectiveness |
| RQSO | Regulatory Quality Oversight System |

DEFINITIONS

| | |
|-------------------------------------|---|
| Audits: | Is a method for verification, witnessing, desktop review and asking questions to the process performers to ensure an employee performing accordingly and match with Business Procedure Instruction (BPI) with the requirements. |
| Deficient: | When the product does not fulfill or does not met the requirements. |
| Deputy Quality Manager | Internal management group who monitor the program level, to ensure conformity to the requirements in the program level. |
| Measurement of Effectiveness (MoE): | Is a threshold that will indicate the possible cause is eliminated or mitigated to an acceptable level. |
| Opportunity: | When the product does not fulfill or does not met the requirements |
| Random Sampling: | Is a procedure for sampling of a population in which taking a sample selection out of batch to eliminate bias. |
| Trend Analysis: | Is a technical tool use base on the past event that might affect the future — a tool to determine if the problem persists, how frequent or the fix was successful. |
| Attribute | Attributes define as table and column are joined. |
| CANum | Corrective Action Number |
| CAResponsibility | Corrective Action Responsibility |
| CAVerResult | Corrective action Result |
| Completion_DateMonthYear | Date Month Year corrective action signed off |
| Entities | Words use to identify person, thing, or place. |
| ItemDescription | Name of the part. |

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

| | |
|--|--|
| ItemIdentifier | Item Identifier is a designated part number |
| ItemNum | Item Number it is part number |
| Intitation_DateMonthYear | Date Month Year corrective action were written. |
| Federal Aviation Administration | Government agencies who oversee the roles and regulations that can affect the public. The voice, eyes and the ears of the public. |
| LineNumber | Number of the airplane |
| ProgramName | Name of the program |
| Proram | Name of the airplane model |
| ResultDescription | Is a Result Description during verification if PASS or FAIL |
| Regulatory Quality System Oversight | Internal quality management who oversee the overall compliance performance of the company and oversee the regulatory requirements. |
| Quality Assurance | A quality personnel who stamp or sign off work instruction order/CA |
| Quality Manager | Manager who manage the operation in respective work center or area |

II. DATA CREATION – INSERT STATEMENTS WITH AND WITHOUT DEFAULTS, STORED PROCEDURES, COMMENTS

```
INSERT INTO Program (ProgramName)
VALUES ('Gold_Line'), ('Silver_Line'), ('Star_Line')

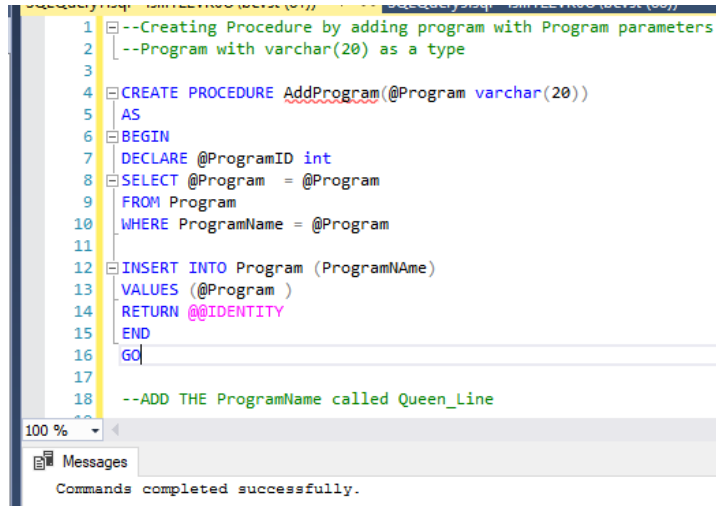

--Creating Procedure by adding program with Program parameters
--Program with varchar(20) as a type

CREATE PROCEDURE AddProgram(@Program varchar(20))
AS
BEGIN
DECLARE @ProgramID int
SELECT @Program = @Program
FROM Program
WHERE ProgramName = @Program

INSERT INTO Program (ProgramName)
VALUES (@Program )
```

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

```
RETURN @@IDENTITY
END
GO
DECLARE @newProgramID int
EXEC @newProgramID = addProgram 'Queen_Line'
SELECT * FROM Program
WHERE ProgramID = @newProgramID
```

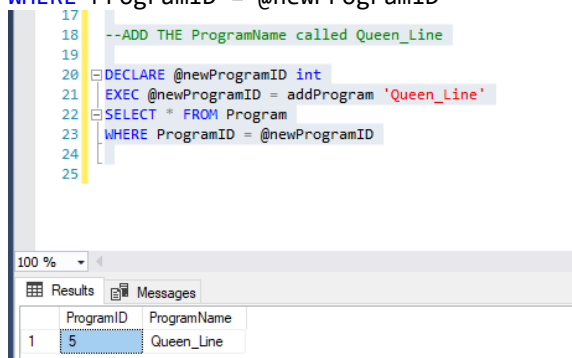

The screenshot shows a SQL script window with the following code:

```
1 --Creating Procedure by adding program with Program parameters
2 --Program with varchar(20) as a type
3
4 CREATE PROCEDURE AddProgram(@Program varchar(20))
5 AS
6 BEGIN
7 DECLARE @ProgramID int
8 SELECT @Program = @Program
9 FROM Program
10 WHERE ProgramName = @Program
11
12 INSERT INTO Program (ProgramName)
13 VALUES (@Program )
14 RETURN @@IDENTITY
15 END
16 GO
17
18 --ADD THE ProgramName called Queen_Line
```

Below the script window, the Messages pane displays: "Commands completed successfully."

--ADD THE ProgramName called Queen_Line

```
DECLARE @newProgramID int
EXEC @newProgramID = addProgram 'Queen_Line'
SELECT * FROM Program
WHERE ProgramID = @newProgramID
```

The screenshot shows the same SQL script as above, but with the Results pane visible at the bottom. The Results pane displays a table with two columns: ProgramID and ProgramName. The first row shows ProgramID 5 and ProgramName Queen_Line.

| ProgramID | ProgramName |
|-----------|-------------|
| 5 | Queen_Line |

III. DATA MANIPULATION – UPDATE STATEMENTS, STORED PROCEDURES, FUNCTIONS, COMMENTS

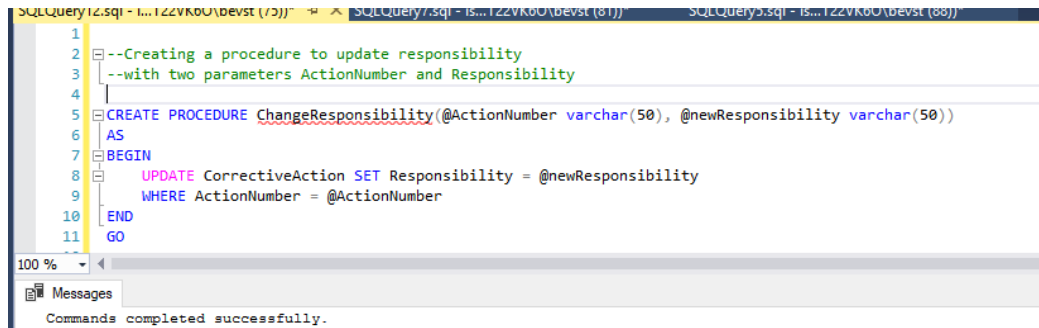

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

```
--Creating a procedure to update responsibility  
--with two parameters ActionNumber and Responsibility
```

```
CREATE PROCEDURE ChangeResponsibility(@ActionNumber varchar(50), @newResponsibility  
AS  
    BEGIN  
        UPDATE CorrectiveAction SET Responsibility = @newResponsibility  
        WHERE ActionNumber = @ActionNumber  
    END  
GO
```

```
EXEC ChangeResponsibility 'C1440046662', 'Supplier'
```

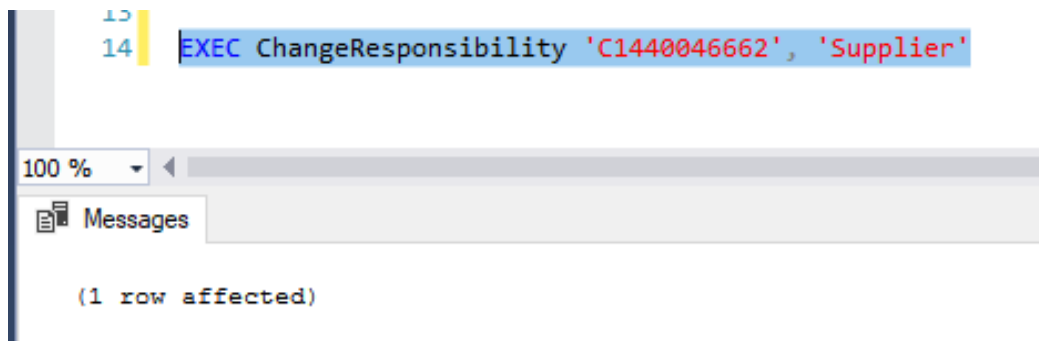

```
SELECT * FROM CorrectiveAction WHERE ActionNumber = 'C1440046662'
```

The screenshot shows the SQL Server Enterprise Manager interface. The SQL query window displays the code for the ChangeResponsibility procedure. The Messages pane at the bottom indicates that the commands were completed successfully.

```
1 --Creating a procedure to update responsibility  
2 --with two parameters ActionNumber and Responsibility  
3  
4  
5 CREATE PROCEDURE ChangeResponsibility(@ActionNumber varchar(50), @newResponsibility varchar(50))  
6 AS  
7 BEGIN  
8     UPDATE CorrectiveAction SET Responsibility = @newResponsibility  
9     WHERE ActionNumber = @ActionNumber  
10 END  
11 GO
```

FROM cte

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

| | Responsibility | Passes | Percent_Passed | Fails | Percent_Failed | ByGroup |
|---|---------------------------|--------|----------------|-------|----------------|---------|
| 1 | Manufacturing | 312 | 90 | 31 | 9 | 343 |
| 2 | Manufacturing New Process | 15 | 88 | 2 | 11 | 17 |

Manufacturing Corrective Action Result(CAR) had a total of 90 percent passing rate on year to end date. The data shows that Engineering had a drawing change drive a new process to a supplier and the process performers on the floor. Base on this data there is an improvement coming up this will increase higher than 90 percent passing rate about three months.

IV.iv. What is the confidence level of CAPA Effectiveness?

```
WITH
cte
AS
(
SELECT
    -- CorrectiveAction Responsibility
    COUNT (CorrectiveAction.CorrectiveActionResultID) TotalCorrectiveAction,
    SUM(CASE CorrectiveAction.CorrectiveActionResultID WHEN 1 THEN 1 ELSE 0 END) AS Passes,
    SUM(CASE CorrectiveAction.CorrectiveActionResultID WHEN 2 THEN 1 ELSE 0 END) AS Fails
FROM CorrectiveAction
--GROUP BY Responsibility
Join CorrectiveActionResult on CorrectiveAction.CorrectiveActionResultID =
CorrectiveActionResult.CorrectiveActionResultID
)
SELECT Passes, 100 * Passes/TotalCorrectiveAction AS Percent_Passed,
        Fails, 100* Fails/TotalCorrectiveAction AS Percent_Failed, TotalCorrectiveAction
FROM cte
```

| | Passes | Percent_Passed | Fails | Percent_Failed | TotalCorrectiveAction |
|---|--------|----------------|-------|----------------|-----------------------|
| 1 | 933 | 91 | 86 | 8 | 1019 |

The year to end Confidence level CAPA Effectiveness is 91 percent in spite of engineering change.

1. What are the top 5 processes in terms of effectiveness?
Please refer to Page 1 Guide to CAPA Effectiveness

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

2. Is CAPA have been adequately shared and included in management review?

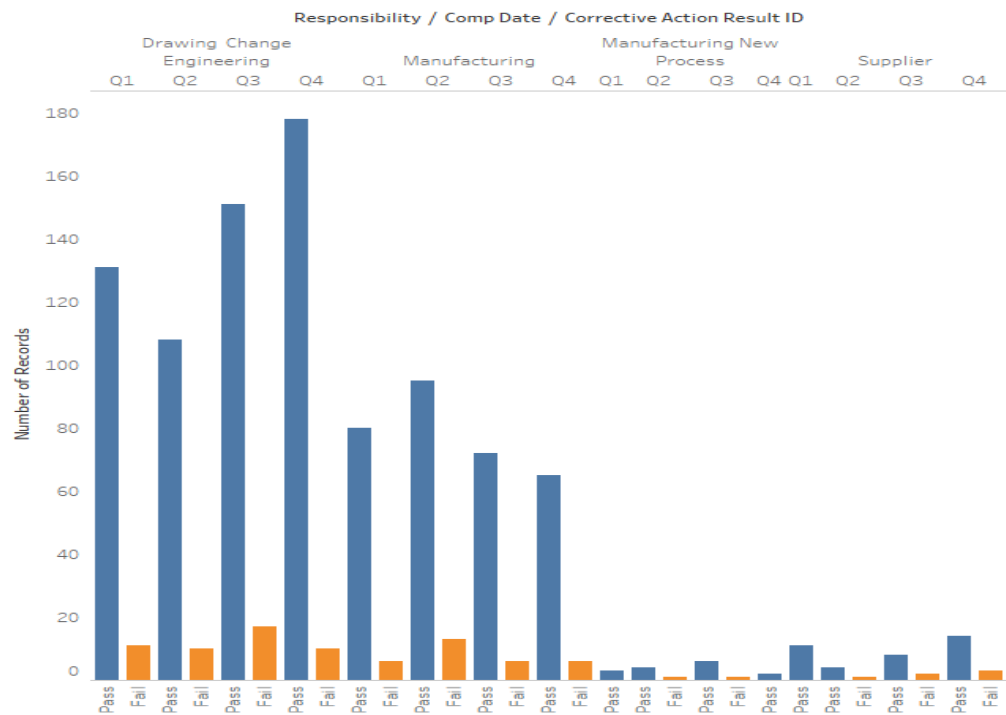

Base on the report all groups are monitored and included in management review.

3. Are there any tools used to track the favorable and unfavorable trend?

CORRECTIVE ACTION AND PREVENTATIVE EFFECTIVENESS IST659 PROJECT

CAPA Effectiveness Report by Quarter

4. What is the employee turnover rate in manufacturing?

5. What is the confidence level of CAPA Effectiveness?

VI. REFLECTION – HOW DID YOUR ASSUMPTIONS FROM THE START OF THE PROJECT CHANGE? WHAT WOULD YOU DO DIFFERENTLY?

In the beginning, I thought my model is straightforward. When I start doing a query, it was not working. I have many to many relationships that contains Foreign key ID in it. Which means doesn't mean anything. I had to redesign my model, added a few tables. The many - to - many relationships contains a significant amount of pieces of information, that is imperative during the query process. What I would do differently is to pay attention to many -to- many relationships and perform some testing as I go to ensure the model is working. Then start loading more data as soon as the model is working.

VI. SUMMARY – INTEGRATING THE 2ND MILESTONE WITH THE 1ST IN A COHESIVE DOCUMENT.

After the integration of milestone one and two, data shows that the Federal Aviation administration's concern on CAPA Effectiveness is not a big issue but could be better. The year to date CAPA Effectiveness is 91 percent. The change in Engineering it triggers a new Process change in Manufacturing. Despite the change, the effectiveness is within the expectation threshold, and results communicated well communicated across the organization.
